

Field of study: Road vehicles Engineering

Programme of studies: Road Vehicles

First Year of study:

**Subject of study: Mathematical Analysis, Code:
D22ARL101**

NUMBER OF CREDITS: 5

YEAR/SEMESTER: 1st year / 1st semester

TYPE OF COURSE: Mandatory

OBJECTIVES: The course offers the students theoretical and practical concepts of the Mathematical Analysis.

CONTENT: Convergence: Sequences and series of real numbers, Power series, Fourier series. Continuity and Differentiability: Functions of several real variables, Implicit functions, The extreme values of a real function of several variables. Integral calculus: Definite integrals with parameters, Improper integrals, Line integrals of the first type, Multiple integrals, First type surface integrals. Elements of field theory.

TEACHING LANGUAGE: Romanian

EVALUATION: Written/oral examination

Diamandescu, Aurel – Matematici Generale, Editura Universitară, Craiova, 2009

Predoi Maria, Bălan Trandafir – Mathematical Analysis, Vol. I, II, Editura Universitară, Craiova, 2005

**Subject of study: Descriptive geometry, Code
D22ARL102**

NUMBER OF CREDITS: 4

YEAR/SEMESTER: 1st year/1st semester

TYPE OF COURSE: Mandatory

OBJECTIVES: The main aim of the course is to prepare students regard to acquiring the basic theoretical and practical concepts from descriptive geometry, to develop the creative skills to see „deep in space” and to prepare project designs. Terms used are under current standards and international standards.

CONTENT:

Projection systems. Line. A line of positions in relation to the planes of projection. The relative positions of two lines. The Plan. Line of a plan. The relative positions of the two planes. The position of a line in a plane. The intersection of plane figures. The projection transformation methods: the method of changing the projection planes, crop rotation method and rotation method of projection planes. Representation of geometric bodies. Sections in geometrical bodies. Development of geometric surfaces. Intersection of geometric bodies. The general method for the determination of the line of intersection

TEACHING LANGUAGE: Romanian

EVALUATION: Written/oral examination

**Subject of study: Study of materials, code:
D22ARL104**

NUMBER OF CREDITS: 5

YEAR/SEMESTER: 1st year/1st semester

TYPE OF COURSE: Mandatory

OBJECTIVES: Study of materials course offers the students basic knowledge about the internal structure and properties of ferrous and nonferrous alloys materials . It is an essential technical discipline needed to further understanding the technology of materials and thermal treatment.

CONTENT: Crystal structures and properties of metals. Solidification and plastic deformation of metals. Binary alloy systems. Structures and properties of ferrous alloys plain carbon steels. Iron-carbon phase diagram. Plain carbon steels . Cast iron. Basic concepts of thermal treatment of carbon steels. Carbon steels transformation under heating and cooling. Austenite transformation under cooling. Martensite transformation. Isothermal and continuous- cooling transformation diagrams of carbon steels. Thermal treatments : annealings , normalizing , quenching, tempering. Aluminium alloys and copper alloys.

SUBJECT: Mechanics I (Code:D22ITTL103)+ Mechanics II (Code:D22ITTL211),

NUMBER OF CREDITS: 5-1st sem., 6-2nd sem.

YEAR/SEMESTER: 1st year/1st sem.+2nd sem.

TYPE OF COURSE: Mandatory

OBJECTIVES: The course presents to students the fundamental notions of analytical mechanics and specific notions of kinematics; kinematical analysis of rigid body in particular motions and, generally, in general motion.

CONTENT:

Reduction of the sliding vectors.

Mass, the centre of mass (definitions, properties, Guldin-Pappus Theorems).

Moments of inertia.

Kinematics of material point.

Kinematics of rigid body.

Kinematics of relative motion for material point.

Kinematics of relative motion for solid body.

Subject of study: Algebra, analytic and differential geometry (Code D22ARL211)

NUMBER OF CREDITS: 5

YEAR/SEMESTER: 1st year/2nd semester

TYPE OF COURSE: Mandatory

TEACHING LANGUAGE: Romanian

EVALUATION: Written/oral examination

Subject of study: Technical drawing and Info-graphics (Code D22ARL212)

NUMBER OF CREDITS: 5

YEAR/SEMESTER: 1st year/2nd semester

TYPE OF COURSE: Mandatory

OBJECTIVES: The course offers to the students theoretical and practical concepts about the drawing of the technical documentation for manufacturing, assembling and repairing operations. Also, the course offers the basics for the graphical representation and correct reading of the technical ideas necessary for each engineer.

CONTENT: The objectives of the course, projecting na drawing systems. The general rules for the correct drawing of the views and sections. The dimension operation in Technical drawing, dimension rules representation, dimension systems, scaled drawing. The drawing, notation and dimension operations for the threads. The material code notation. The roughness of the surfaces notation. Assembly drawing, the drawing rules, the bill of materials. The gears drawing operation.

General aspects about Computer Graphics. The evolution of Computer Graphics. A short history of the CAD (Computer Aided Design) concept. The classification of the CAD systems. The location of the CAD concept in the industrial company. New concepts in CAD. The concepts and software adjacent to the CAD concept. The CAM (Computer Aided Machining) concept. The FEA (Finite Element Analysis) concept. The dynamic and kinematic simulation software. Parameterization and bidirectionality. Modeling software modules. 2D sketches. Base and additional shapes. Reference geometrical elements. Complex shapes. Curves, surfaces. Assembly software module. Conectors, geometrical constraints, equations, mechanical constraints. Software modules for the technical documentation. The 2D drawings. Elements of virtual testing. Animation and realist views.

Subject of study: Special mathematics, Code: D22ARL321

NUMBER OF CREDITS: 4

YEAR/SEMESTER: 2nd year/1st semester

TYPE OF COURSE: Mandatory

TEACHING LANGUAGE: Romanian

EVALUATION: Written/oral examination

Subject of study: Mechanical vibrations, Code D22ARL323

NUMBER OF CREDITS: 4

YEAR/SEMESTER: 2nd year/1st semester

TYPE OF COURSE: Mandatory

OBJECTIVES: The course offers the students theoretical and practical concepts regarding the modelling process of vibrating mechanical systems , both discrete and continuous as well as different methods both analytical and numerical for solving these models.

CONTENT: General considerations, Elements for modeling the mechanical systems with one degree of freedom (1DOF) - (un)damping, Elements for modeling the mechanical systems 2DOF - (un)damping, Elements for modeling mechanical systems xDOF and numerical methods for solving them, Mechanical vibrations of continuous systems (longitudinal, rotational and bending), Special problems of vibrational systems (biological systems, coupled problems etc.).

Subject of study: Machining and machine-tools, Code: D22ARL325

NUMBER OF CREDITS: 3

YEAR/SEMESTER: 2nd year/1st semester

TYPE OF COURSE: Mandatory

OBJECTIVES: The course teaches the students theoretical and practical knowledge regarding the machines manufacturing.

CONTENT: Concepts regarding the chipping and the cutting tools theory. Elements of the machines kinematical chains theory. Products manufacturing on lathes. Products manufacturing on the drillers and the boring machines. Products manufacturing on the milling machines. Products manufacturing on the planing machines, slotters and die-slotted machines. Products manufacturing on the grinding machines. Gears teeths manufacturing on the gear cutting machines. Products manufacturing on machines with program command. Products manufacturing on aggregates and automatic lines.

Subject of study: Fluids mechanics, Code:D22ARL434

NUMBER OF CREDITS: 4

YEAR/SEMESTER: 2nd year/2nd semester

TYPE OF COURSE: fundamental

OBJECTIVES: The course offers to the students the theoretical and practical concepts about the fluids flow with application in the mechanical engineering

CONTENT:

The main properties of fluids. The general methods of study used in the mechanics of fluids. The fundamental equations of the mechanics fluids. The kinematics of the fluid. The dynamics of the ideal fluids. The statics of fluids. The dynamics of the viscous fluids under the laminar and turbulent flow.

The applied of the mechanics of fluids.

Subject of study: Tolerances and dimensional control, Code: D22ARL435**NUMBER OF CREDITS:** 3**YEAR/SEMESTER:** 2nd year/ 2nd semester**TYPE OF COURSE:** Mandatory

OBJECTIVES: The course provides students with specific notions for dimensional and geometric accuracy of mechanical engineering parts, correct prescription of economic tolerances when designing assembly fits of main types: cylindrical and conical, with bearings, thread, feathers and grooves gear. Laboratory work skills training needed to perform control operations aimed in manufacturing processes of parts and assembly listed above, by performing measurements with different methods and measuring devices.

CONTENT: Dimensional and geometric tolerances. Surface roughness. Tolerances, fits and control of smooth cylindrical assemblies. Chains of dimensions. Tolerances, fits and control of conical parts and assemblies. Bearing assembly tolerances and fits. Tolerances, fits and control threaded fasteners. Tolerances, fits and control parts and assemblies with wedges and grooves. Tolerances, fits and control gear wheels and gear cylinders. 3D measurement with TESA MultiGage articulated arm.

Third Year of study:

Subject of study: The hydraulic and pneumatic drives, Code: D22ARL544

NUMBER OF CREDITS: 4

YEAR/SEMESTER: 3nd year/1th semester

TYPE OF COURSE: Mandatory

OBJECTIVES The course offers to the students the theoretical and practical concepts used for design calculation of the hydraulic and pneumatic components and choosing these for the hydraulic and pneumatic systems.

CONTENT:

The internal problems in hydraulic systems (SAH). Flow balance equations in SAH. Fundamentals of he hydraulic resistances in SAH. The applications concerning the calculation of the hydraulic schemes in steady and unsteady regime of SAH. The apparatus used in the hydraulic and pneumatic systems. The hydraulic volume machines. The general theory of the hydraulic volume generators (GHV). Particular types of the rotary volume generators GVR. The volume rotary engines (MVR). The general theory of the stationary MVR. The stationary characteristics of the MVR. The linear volume engines (MVL). The general theory of the MVL. The stationary characteristics of the MVL. The practical problems in SAH concerning the installation of the hydraulic volume machines. The hydrodynamic machines. Fans.

EVALUATION: Written examination

Subject of study: Machine Elements I (Code:D22ARL548) + II (Code: D22ARL654)

NUMBER OF CREDITS: 5+3

YEAR/SEMESTER: 3rd year/1st+2nd semester

TYPE OF COURSE: Technical culture of specialty.

OBJECTIVES: Promoting and developing of some concepts, machine elements design procedures and techniques from mechanical and mechatronic systems structure, stimulating and forming the creativity students skills by elaborating original solutions and modern design through facilities brought by CAD/CAM/CAE.

This course addresses to students which follows the 4 years undergraduate studies at Faculty of Mechanics from Automotive Engineering (AR), Industrial Engineering (TCM), Transport

Engineering (ITT), Engineering and Management (IEM).

CONTENT: Machine elements design basics; Screw fastening and power screw transmissions; Gears and gear transmissions; Chain drives; Friction wheels transmissions; Belt drives; Continuously variable transmissions; Shafts and axes; Rolling contact bearings; Sliding contact bearings; Couplings; Sealing elements; Threaded joints; Assemblies through sunk and tapered keys; Spline assemblies; Polygonal profiles assemblies; Cotter and knuckle joints; Conical couplings; Assemblies through conical friction elements; Clamp couplings; Fretting and fatigue assemblies; Assemblies through elastic and dumping elements.

Subject of study: Thermotechnics and thermal machines I (Code:D22ARL549) + II (Code:D22ARL656)

Number of credits: 5 credits/3 credits

Year/Semester: 3rd year/ 1st and 2nd semester

Type of Course: Mandatory

Objectives: The course present students the notions necessary for understanding thermal phenomena, utilisation of heat and to obtain mechanical work from heat. Also presents the basic principles of design and operation of thermal installation.

Content: General notions about the laws of perfect gas and simple transformations. The perfect gas mixtures and the thermodynamic principles. There are presented the methods for thermodynamics analyses. For the analyses of real processes of thermal machines are presented the real gases showing the differences of the properties are used in some technical applications. Are analyzed the theoretical principles of thermal machines through

YEAR/SEMESTER: 3rd year/2nd semester
TYPE OF COURSE: Mandatory

OBJECTIVES: This course forms and guide the students assimilation capacity for modelling and simulating, through modern methods, of the behavior in static and dynamic mode structures and mobile mechanical systems, based on multi body systems theory and finite element method. Another aim is the one that it can be develop and form, the students ability through applications by using important modelling and analysis software (ADAMS, ANSYS, etc.).

CONTENT: Elements of matrices and vectorial algebra. Computer kinematic and dynamic modelling through computational methods of mechanical mobile systems.

Kinematic modelling and simulations with ADAMS software. Linear elasticity elements. Finite element modelling basics. Finite element modelling in static and dynamic mode of mechanical structures (theory and applications). Modelling and simulations by using finite element method with ANSYS and COSMOS software.

Objectives: It is presented the necessary background for understanding of the phenomena that occurs in the thermal plants and machines. They are showed the fundamentals for the study of heat and mass transfer processes for steady and transient.

Content: General information about the heat transfer by conduction, convection and radiation for steady and transient conditions. They are presented the calculation methods for the global heat transfer with examples about the characteristics of the thermal insulation for different surfaces. For the mass transfer there are analyzed Fick's laws which describe the diffusion phenomenon as process regarding the amount of substance that is being transported. As an example for technical applications there are studied the methods for thermal design of a heat exchanger.

SUBJECT OF STUDY: Special installations for autovehicles, **Code:**D22ARL774

NUMBER OF CREDITS: 4

YEAR/SEMESTER: 4th year/1st semester

TYPE OF COURSE: Mandatory

OBJECTIVES: The course presents students general concepts regarding the construction and

operation of special equipment for motor vehicles and facilitates command and control knowledge elements managed by the Central Unit Calculator.

CONTENT: Mixture preparation systems at MAS: Electronic equipment for low pressure gas injection. Electronics gasoline direct injection. Mixture ignition engines Otto engine Power Plant classical MAC. Injection systems m.a.c. with electronic control of fuel injection. Overheating engines. Control of motor vehicle emissions. Engine cooling control with variable speed fans special equipment electronic stability control. Special equipment electronic traction control, steering and suspension. Safety features and comfort.

TEACHING LANGUAGE: Romanian

EVALUATION: Written/oral examination

Subject of study: Calculation and Construction of Autovehicles I (Code: D22ARL775)+ II (Code: D22ARL882)

NUMBER OF CREDITS: 5/1st semester, 2/2nd semester

YEAR/SEMESTER: 4th year/1st and 2nd semester

TYPE OF COURSE: Mandatory

OBJECTIVES: Discipline aims to make students acquire the basic concepts of calculation and construction of the autovehicles, organolological analysis skills development, skills development of design and creativity in the field of autovehicles.

CONTENT: General concepts about autovehicles, construction and calculation elements for: clutches, gearboxes, longitudinal transmissions, front and rear axles, steering systems, braking systems, suspension systems.

TEACHING LANGUAGE: Romanian

EVALUATION: Written/oral examination

Subject of study: Calculation and Construction of Autovehicles -Project (Code: D22ARL883)

NUMBER OF CREDITS: 2/2nd semester

YEAR/SEMESTER: 4th year/2nd semester

TYPE OF Project: Mandatory

TEACHING LANGUAGE: Romanian

EVALUATION: Written/oral examination

Subject of study: Road vehicle manufacturing technologies I (Code:D22ARL776) + II (Code: D22ARL881)

NUMBER OF CREDITS: 3-1st semester/3-2nd semester

YEAR/SEMESTER: 4th year/1st and 2nd semester

TYPE OF COURSE: Mandatory

OBJECTIVES: The course provides students with theoretical and practical concepts conceptual and technological principles of vehicle manufacture

CONTENT: General notions about processes, determine the elements necessary preparation processes, automotive moldings, the calculation precision machining, surface quality automotive parts, bases, dimensions and devices working methods and reconditioning of vehicle parts, manufacturing technologies tree parts, manufacturing technology type parts bush, technology manufacturing pistons, rings and connecting rod, manufacturing technology type casing parts. painting and additional protection vehicles..

Subject of study: Equipment and automotive diagnostic techniques, Code D22ARL877

NUMBER OF CREDITS: 4

YEAR/SEMESTER: 4th year/ 2nd semester

TYPE OF COURSE: fundamental

OBJECTIVES: The course provides students with knowledge regarding vehicles' specific elements of diagnosis equipment and techniques, and training skills in automotive diagnosis and understanding, explaining and interpreting theoretical and practical content of the discipline.

CONTENT: General principles of diagnosis. General diagnosis of the vehicle. Diagnosing the technical condition of the engine. Diagnosing the ignition system. Diagnosing the technical condition of the transmission. Steering Diagnosis. Brake System Diagnosis. Suspension Diagnosis. General diagnostics using electronic tester.

Subject of study: Car bodies and structures,
Code:D22ARL878

NUMBER OF CREDITS: 3

YEAR/SEMESTER: 4th year/2nd semester

TYPE OF COURSE: fundamental (specialized, domain)

OBJECTIVES: Learning general concepts of body building, knowledge of computing elements and aspects of the design for vehicle bodies and structures, Knowledge of technological achievement and test phases of vehicle bodies and structures; Primary security; Cockpit ergonomics.

CONTENT: General considerations on the construction of bodies. Technical design of the body shape and the bearing structure. Items for car body design. Body design elements for buses and trucks. Body as a security feature. Constructive measures and methods for conditions regarding: information security, security primary (active) and secondary safety (passive protection). Tests of passive safety body. Calculation of body elements. Solutions and building blocks bearing structures. Materials used in car body construction. Corrosion and corrosion protection of metal parts.

Subject of study: Reliability of vehicles,
Code:D22ARL879

NUMBER OF CREDITS: 4

YEAR/SEMESTER: 4th year/2nd semester

TYPE OF COURSE: specialty

OBJECTIVES: Learning by students of the relationship of reliability, maintainability and terotechnics vehicles

CONTENT: Reliability: reliable vehicles; Study of reliability, object definitions; Random variables; Theoretical aspects of reliability, the basic parameters; Primary processing of experimental data; Theoretical laws of distribution used in reliability; Confidence intervals; Parameters of reliability for repairable items and unrecoverable; Reliability of systems; Reliability tests..

Subject of study: Special transmissions for autovehicles, Code: D22ARL785

NUMBER OF CREDITS: 2

YEAR/SEMESTER: 4th year/1st semester

TYPE OF COURSE: Optional

OBJECTIVES: Student acquaintances with different formalisms used in mechanical transmissions modelling; thoroughgoing study, previously acquired, regarding mechanical transmissions; student acquaintances with numerical computations specific aspects, applicable on kinematic and dynamic studies of mechanical transmissions with variable structure.

This course addresses to 4th year students which follows the 4 years undergraduate studies at Faculty of Mechanics from Automotive Engineering (AR).

CONTENT: Knowledge regarding the mechanical transmissions structure and topology; mechanical transmissions classification; mechanical transmissions with invariable structure; mechanical

transmissions with variable structure; transfer functions; algorithms for mechanical transmissions kinematic analysis; mechanical transmissions kinematic optimization; error sources in mechanical transmissions kinematic analysis; algorithms for optimizing the mechanical transmissions kinematic synthesis; mechanical transmissions efficiency evaluations.
